

PROTON21

FUSION POWER IS THE NEXT

BERLIN

12/06/2024

Three generations of fusion setup have been developed by Proton-21 since 1999

Proton21 has achieved cutting-edge results and is looking for partners to achieve network-ready prototype

- **R&D cooperation and scientific enhancement** - speed up development and engineering of energy capture and frequency generation technologies
- **Financial resources** - inject additional capital to achieve goals faster
- **Relocation** - create a European or US base to address war risks

Record fusion energy gain factor achieved (higher than any competing project in the world): $Q1=5$ (fusion energy produced to the energy delivered by the driver); $Q2=0.67$ (fusion energy produced to the energy expended for the whole process)

**We are ready to present our results and
open for joint efforts of a next generation development**
